

SMD Common Mode Choke - 1211 (Power Line)

Features & Application

2020/1/1

- Chip common mode filter for large current applications

For each series, there is excellent common mode impedance and noise suppression in a compact case.

- Compatible with high-density portable devices, which are always being made smaller and lighter, because the height has been reduced.
- Power line noise countermeasure for various electronic equipmen Noise countermeasure for adapter lines and battery lines or PCs and word processors.

Typical Impedance vs Frequency

Common Mode & Differential mode

GENERAL CHARACTERISTICS

1. Operating temperature range: -40 TO $+125^{\circ}\text{C}$ (Includes temperature when the coil is heated)
2. External appearance: On visual inspection, the coil has no external defects.
3. Terminal strength: After soldering. Between copper plate and terminals of coil. Push in two directions of X.Y withstanding at below conditions.

Terminal should not peel off. (refer to figure at right) 0.98kg Min -1211

4. Insulating resistance: Over $100\text{M}\Omega$ at 100V D.C. between coil and coil
5. Dielectric strength: No dielectric breakdown at 100V D.C. for 1 minute between coil and core
6. Temperature characteristics: Inductance coefficient $(0\sim 2,000)\times 10^{-6}/(^{\circ}\text{C } -25\sim +80)$. $^{\circ}\text{C}$, inductance deviation within $\pm 5.0\%$, after 96 hours.
7. Humidity characteristics (Moisture Resistance): Inductance deviation within $\pm 5\%$, after 96 hours in $90\sim 95\%$ relative humidity at 40 ± 2 and 1 hour drying under normal condition.
8. Vibration resistance: Inductance deviation within $\pm 5\%$, after vibration for 1 hour. In each of three orientations at sweep vibration ($10\sim 55\sim 10$ Hz) with 1.5mm P-P amplitudes.
9. Shock resistance: Inductance deviation within $\pm 5\%$, after being dropped once with 981m/s^2 (100G) shock attitude upon a rubber block method shock testing machine, in three different
10. Resistance to Soldering Heat: 260 , 10 seconds (See attached recommend reflow)
11. Storage environment: Storage condition: Temperature Range: $10 \sim 35$ (Generally: $21 \sim 31$), Humidity Range: $50\% \sim 80\%$ RH (Generally: $65\% \sim 75\%$); Transportation condition: Temperature Range: $-35 \sim 85$, Humidity Range: $50\% \sim 95\%$ RH
12. Use components within 12 months. If 12 months or more have elapsed, check solderability before use.
